

It is estimated between 30 and 40 % of children today are medically diagnosed as suffering with ADD or ADHD on the basis of showing a certain number of symptoms from medical check lists. Ten times more boys than girls are so diagnosed, with symptoms ranging from mild to severe. Interestingly people affected are usually of normal or above average intelligence. Adults can have the condition and may have learned more coping skills.

There is a debate as to whether half of the children today are seriously disturbed or are we seeing an observable evolutionary change. Are we witnessing a new "modern child" and we do not have the right way of looking at them or are we observing the result of damage caused by growing up under the conditions of our time? Perhaps all of the above are true and we are witnessing many children with interesting combinations of these issues. Certainly some children are affected by modern society and the conditions of our times. Our society has more environmental pollution and pollutants invading our bodies including food additives, super sweeteners, toxins, chemicals, vaccinations, drugs. We have different stress, hectic lifestyles, coldness, fears, anxieties, competition, than before. Many children have inherited issues that set them up to have learning, behavioral and or developmental challenges. And yet others might be what some are calling an advanced spiritually evolved child, a modern child. Some call them Indigo Children or Star Children. Yet regardless of the root source, our children are being lumped together and labeled with what medical science is calling ADD and or ADHD.

It is wise, as educators, to inform parents about these particular issues and assure parents that all of the above mentioned issues can be traced to physiological roots. We simply call them residues, toxins, chemicals, heavy metals, bacteria, viruses, fungi or miasms. Stress and other areas that go along with living in modern society all have a physiological effect as well. We like to look at all of this as an infection, not too different from a cold, ear infection or strep throat. We have the experience and the results to assure parents that their child is not "defective" in any way. They have pathogens that are affecting them creating certain symptoms. It is paramount to express all of this to the child directly as well as the parent. If the child hears it from you, the practitioner, it carries a lot more weight than hearing it from mom. It is with a great sense of gratitude and comfort that we are able to say that we have safe effective treatments for all of these issues.

Since the root of what the medical profession is labeling as ADD or ADHD varies from child to child, we suggest practitioners energetically read the individual items listed below which effect children with ADD or ADHD. These specific areas of challenge are in line with current studies and are currently agreed areas of measurements. If we can find the remedies that help high numbers to go to "0", then we have addressed and cleared all of the issues rooting the symptoms that make up ADD or ADHD for each individual child.

**This is not intended to be nor is it used as a means of diagnosis. It is a benchmark by which we compare the effectiveness of different remedies.**

For Attention Deficit Disorder (ADD)

**Energetically measure the following on a scale from 0-100.**

Attention Deficit Disorder \_\_\_\_\_

Attention Span \_\_\_\_\_

Concentration \_\_\_\_\_

Focus \_\_\_\_\_

For Attention Deficit Hyperactivity Disorder (ADHD)

**Energetically measure the following on a scale from 0-100.**

Attention Deficit Hyperactivity Disorder \_\_\_\_\_

Attention Span \_\_\_\_\_

Concentration \_\_\_\_\_

Focus \_\_\_\_\_

Impulsivity \_\_\_\_\_

Hyperactivity \_\_\_\_\_

In addition to the above mentioned areas there are other areas that might also affect children with ADHD but are not necessary for diagnosis of ADHD. It would be wise to ask the parent or caregiver if any of the following items relate to their child: emotional liability, impairment of perception, difficulty with conceptualization, delayed or other issues around language development, memory and difficulty with motor skills.

We have developed a remedy to help Indigo Children feel more comfortable in this foreign earth plane and in their new slowed down human bodies. It would be wise to test children for INDIGO ADJUSTMENT to see if this could help. This area is controversial and popular among parents who want to think their child is special and want to deny that the child has real problems. The check may also help to separate wheat from chaff.

**Many of the ADD and ADHD issues are succinctly satisfied by use of the PKU remedies. See the information under the title, PHENYLKETONURIA. Below is a list of remedies that may also help and were very successful before we found the deeper solution in PKU.**

**For 10 years we used these antidotes to lead and aspartame as the ADD solution. They still work although the PKU remedies have a deeper and more permanent effect.**

**LEAD**

All white sugar is bleached with lead and it is hard to find anyone who doesn't somehow have white sugar. The bodies of children are growing and trying to gather as much calcium as possible out of the blood stream. Along comes lead with the same size, shape and valence as calcium. The body says okay and absorbs it into the bones and brain. Once lodged in, lead prevents the absorption of calcium. In the brain it prevents the neurological flow and in the bones it gives what doctors call "growing pains". It is amazing how the antidote for **lead** opens the brain, relieves the growing pains and the ADD goes away.

In one instance we started with a 13-year-old boy who was getting Cs and Ds in school and threatened with repeating a grade. After six months of some the remedies shown in the summary we received a copy of the report card showing mostly As and a certificate showing the boy on the honor roll.

However we realized that children would usually find their way to candy or other lead sources, so it was necessary to repeat these remedies periodically to antidote fresh infections of lead.

**ASPARTAME**

Those artificial sweeteners are made of aspartame, which is equivalent to a steady diet of diluted street drugs. Artificial sugar in the form of aspartame (in regular and diet sodas, most diet foods, and 1,500 other US food products) fries the brain. You may as well put the brain in a frying pan and simmer for decades, because the aspartame lodges in the brain unless antidoted. It is called the product most responsible for the dumbing of the country. It drives people to short attention spans, unable to plan and conceive deep issues and unable to read with much retention. We see this equally in children and adults. With the **Aspartame** remedy they report that it felt like someone took a clamp off their brains.

**NATURAL FLAVORS**

Now that the patent has expired for both Aspartame and Monosodium Glutamate, many companies are combining the artificial sweeteners in formulas referred to as "natural flavors". They are commonly in all soft drinks, whether of not under this label. Not every "natural flavor" is this combination, which purposefully muddies the waters. Just like the two harmful formulas alone, these will eat your brain.

**ISSUES THAT LOOK LIKE ADD**

Other issues include drugs (**Drug Residue**), brain growths, vision difficulties, and reaction to discord at home.

For young ladies and gentlemen coming into their hormones, the advent can resemble a berserk carnival ride. We have used a homeopathic called **Tiger Focus** with great success at reducing the mood swings. (It is not the answer for more adult PMS and there are other equally effective remedies shown elsewhere).

For males and females there is a kind of rebelliousness that often shows up. We thought it was just the definition of teenage until we started using **Fetal Alcohol Syndrome** antidote. If you suggest going right, they will go left, etc. It can come to children who have parents who don't drink at all.

**Brain Clear** and **Nogin Deklogin** have been used to clear the funguses and drosses left over after long-term infections of lead, aspartame and natural flavors. Both are known to calm the nerves.

**SUMMARY OF REMEDIES**

With range of mega bottles needed

<b>ASPARTAME (antidote)</b>	<b>2-9</b>
<b>BRAIN CLEAR</b>	<b>1-2</b>
<b>FETAL ALCOHOL SYNDROME</b>	<b>1-3</b>
<b>LEAD (antidote)</b>	<b>1-3</b>
<b>NATURAL FLAVORS</b>	<b>2-9</b>
<b>NOGIN DEKLOGIN</b>	<b>1-2</b>
<b>TIGER FOCUS</b>	<b>1</b>

**LEAD**

**MONTHS OF EXPERIENCE - 191**  
**APRX # PEOPLE - 1,500**

**ASPARTAME**

**MONTHS OF EXPERIENCE - 133**  
**APRX # PEOPLE - 870**

**BRAIN CLEAR & NOGIN DEKLOGIN**

**MONTHS OF EXPERIENCE - 113**  
**APRX # PEOPLE - 820**

In children under age 7 there are some common infections that add to moods or distractions. Temper Tantrums can have as their basis **Ergot**. Penicillin is currently thought to be a drug but it is a natural mold often growing on grain products (it also is a common house mold). More severe forms of temper displays can be remedied by **Peniergot** or **Penituberculosis**. Long term infections of penicillin (a mold) and tuberculosis (a bacteria found more often outside the lungs than in the lungs) can cause a person to fight or protest almost every aspect of life. (See also malabsorption issues of **Sprue** and **Carbohydrates Block** for other carbohydrate issues).

Parents who have a **Penituberculosis** infection don't know life any differently than the experience of a constant fight. They are compelled to be rebels against much of society or protest the actions of most any authority. That is not to say that the society is perfect and does not warrant protest. However, protest instead of constructive efforts towards a better solution are a world apart. This combination infection prevents the person from developing a better solution because they are so busy stating what is wrong. One lady was found to need 27 bottles (15-20 bottles are common). Before she took it she was warned that this could change the direction of her life from protest to creativity. She was enough disgusted with a life of non-success that she was ready for a change. She took all the bottles over a period of a year. The next year she reported that indeed her life had changed. The business she had that could never quite turn a profit began to take off. Her personal life took on new meaning and new associations. She finally began to create because she was no longer dragged down by an infection that drained her time into protest. You may be a parent who has this infection or you may want to know the consequences of a child that grows up with it. It is very similar to an infection called **Fetal Alcohol Syndrome** (previously described) that also causes resistance more than success.

A little more obscure is an infection called **Galactose Brain Toxin**. Galactose is a form of carbohydrate that is normally changed to glucose in the liver. When the system does not convert the carbohydrates, the brain is starved. The child's mind is almost absent or disengaged because it doesn't have enough food. There can be mood changes from sweet to downright cantankerous. The condition can also be seen with nondigestion of galactose in the remedies **Galactosemia I** or **Galactosemia I I**. Milk is the most common form of galactose. (See also **Lactose Intolerance** or **Lactose Sensitive**). There is a series of 9 remedies, each entitled **Antigen-Antibody Mix-up** with a number following the title that are candidates to accompany the Galactose group. A skin rash is the most common sign, followed by digestive upsets and aches in the joints. A remedy with little experience behind it so far called **GABA Deficiency** is also a candidate. In addition to attention problems there is a muscle soreness that is characteristic.

#### SUMMARY OF REMEDIES

With range of mega bottles needed

<b>ERGOT</b>	1-2
<b>GABA DEFICIENCY</b>	1-3
<b>GALACTOSEMIA I</b>	2-3
<b>GALACTOSEMIA I I</b>	2-3
<b>GALACTOSE BRAIN TOXIN</b>	2-3
<b>PENIERGOT</b>	1-2
<b>PENITUBERCULOSIS</b>	1-2
