

Drugs, legal or illegal, have powerful effects and side effects on bodies. Those effects have more effects, usually not so good. Helping people to detoxify has many good direct effects on the body.

We often think of illegal, "recreational" drugs as the problem when we mention drug problems. Many of them are addictive. It is hard to break addictions, but we have found success at the physical level with **Quick Stop**. The psychological problems are usually bigger than the physical problems, but decreasing the physical addiction is helpful. There are unpublished remedies for almost every known form of drug.

For the state of mind and emotion, the Borna Virus Combination, **Addiction** has proven to be helpful. It is to be taken with the specific form of addiction, like **Alcohol Addiction**, **Marijuana Addiction**, **Smoking Addiction**. If you don't take general **Addiction** with the specific form of addiction, you may simply change the form of addiction. One man didn't listen. He took **Alcohol Addiction** (alone) and quit alcohol . . . only to emotionally abuse his wife over religious issues that became his new form of addiction. There are remedies for other, non-drug addictions.

**SUMMARY OF REMEDIES**  
(with range of mega bottles needed)

<b>Addiction</b>	15/-30/
<b>Alcohol Addiction</b>	15/-30/
<b>Astrocyte Nucleus Disease 1</b>	4-5
<b>Astrocyte Nucleus Disease 2</b>	4-5
<b>Chem Out</b>	1-3
<b>Drug Damage – Axon Enzyme Restore</b>	4-7
<b>Drug Residue</b>	4-8
<b>Marijuana Addiction</b>	15/-30/
<b>Marijuana Damage – Axon Enzyme Restore</b>	4-7
<b>Mercurous Arsenic</b>	3-6
<b>Platinum</b>	2-7
<b>Platinum Sulfide</b>	2-7
<b>Smoking Addiction</b>	15/-30/

Drugs store in axons and diminish nerve functions, especially in the brain. The remedy, **Drug Damage – Axon Enzyme Restore** has been very effective in restoring the nerve and brain function. **Drug Residue** helps more in the organs.

One young lady was found to have a case of high-functioning Autism. She began the remedy and immediately started having headaches, nightmares and brain fog. Then we learned she had a long history with recreational drugs. As she took the above remedy the complications cleared and the Autism remedy worked fully. She quit attracting and associating with drug heads, her thinking cleared up and her whole life is reported to have moved a major step forward.

We used to think Marijuana was a fairly benign drug of choice. Then we witnessed that users slowly became emotionally unstable, less dependable and made irrational decisions. Those who took **Marijuana Damage – Axon Enzyme Restore** noticed that mental clarity and emotional sureness returned. If you also have blood sugar problems the insecurity is more pronounced with marijuana.

The liver holds most of the drugs, so we use **Chem Out** to cleanse the liver. Most forms of chemotherapy contain either **Platinum** or **Platinum Sulfide**. We do not suggest using these remedies during chemotherapy because it could diminish the effects of chemo. After chemotherapy, the frequent result is that grey hair grows in after hair loss and the mind works less efficiently. The nick-name of "chemo-brain" is used to describe the immense brain fog that follows. **Astrocyte Nucleus Disease 1** or **2** with **Chem Out** usually cleans the condition away and lifts the fog. Sorry, we haven't found the solution to grey hair yet.

Many drugs are based on mercury and/or arsenic. **Mercurous Arsenic** lands in the adrenals of legal and illegal drug users. Many cases of drug use are denied, but the **Mercurous Arsenic** finding will tell the tale.

It would be like preaching to the choir to mention some of the drugs that come to us from the pharmacy, over the counter and through our food. Below is a list of some of the "drugs" we have made remedies for. The newest finding is that some of these items may have stored in our nerves. Whereas we previously thought of these as toxins, we now see them as storing in the axons of our nerves (and brains). There is a reason why they call the western diet the "dumbing" of the nation.

### FOOD DRUG CHEMICALS

These are described often under digestion or elsewhere. They are designed to take the chemical out of the organs that they toxify. **Drug Damage-Axon Enzyme Restore** may be needed to take them out of our nerves and brain.

**Aspartame** and **Aspartame Hydrogenized** are known as artificial sweeteners. In essence they are drugs. We found them responsible for the phenomenal rise in **PKU**, which became the main cause of Attention Deficit Disorder.

Monosodium Glutamate (**MSG**) is a drug that makes your brain think that food tastes better than it does. When the patent expired, its basic formula was combined with the basic formula of **Aspartame** and was, by court action, allowed to be called **Natural Flavors**. (Not everything called "natural flavors" is this combination, but care should be taken with this term especially in soft drinks).

**Benzene** is in more foods than we want to know about. One form is called **Pancreas Poison** because it causes pancreatic cancer. There are many who feel that cancer will not go away as long as there is benzene in the body. It also comes from non food sources.

**Fluoride** is a drug in our minds. It is mandated to be put in all municipal water even though its damage has become legendary. Look at the Master User Guide for the many combinations of fluoride.

**Formaldehyde** is also widely used as a preservative and is not distinguished from drugs by the FDA. The bitter taste of the ham in eggs benedict at the restaurant is because the ham was dipped in formaldehyde. See our user guide for the many combinations.

**Methanol** (wood alcohol) is widely used in the production of alcohol, artificial sweeteners, sodas, bottled water, powdered drinks (often from health food stores). Ingestion paralyzes eye muscles and may cause death. It also gravitates to the pancreas where it attracts pancreas flukes.

### SUMMARY OF REMEDIES (with range of mega bottles needed)

<b>Aspartame</b>	1-9
<b>Aspartame Hydrogenized</b>	1-9
<b>Benzene</b>	3-8
<b>Fluoride</b>	3-9
<b>Fluoroquinolones</b>	2-7
<b>Formaldehyde</b>	3-8
<b>Methanol</b>	4-8
<b>MSG</b>	1-3
<b>NASID</b>	3-8
<b>Natural Flavors</b>	1-7
<b>Pancreas Poison</b>	2-4
<b>Phenylpropanolamine</b>	2-4

### MEDICINE DRUG CHEMICALS

**Fluoroquinolones** are in a chemical family in prescription drugs including Avelox, Cipro, Floxin, Levaquin, Mazaquin, Noroxin, Tequin and Zagam. So far Cipro, Floxin and Noroxin have been linked to severe tendon inflammation because of the presence of this ingredient.

**NASIDs** are the common ingredient in non-steroidal, anti-inflammatory drugs like aspirin. The cumulative deposits smother and kill nerves over a period of usage.

In 2001 the FDA declared **Phenylpropanolamine** as unsafe because (even in one dosage) it caused strokes (particularly in women). It was in many over-the-counter drugs including nasal sprays and many synthetic hormone replacement therapies. There are residues still left in many people.
