

Parkinson's is a neurological condition of the posterior pituitary extension into the Substantia Nigra of the Tegmentum. Its chief symptoms are a shaking of the hand/forearm, pill rolling of the fingers, resting tremor, a "mask-like face with arched eyebrows", shuffling gait, muscle rigidity, weakness, bent-over posture and slowness of response.

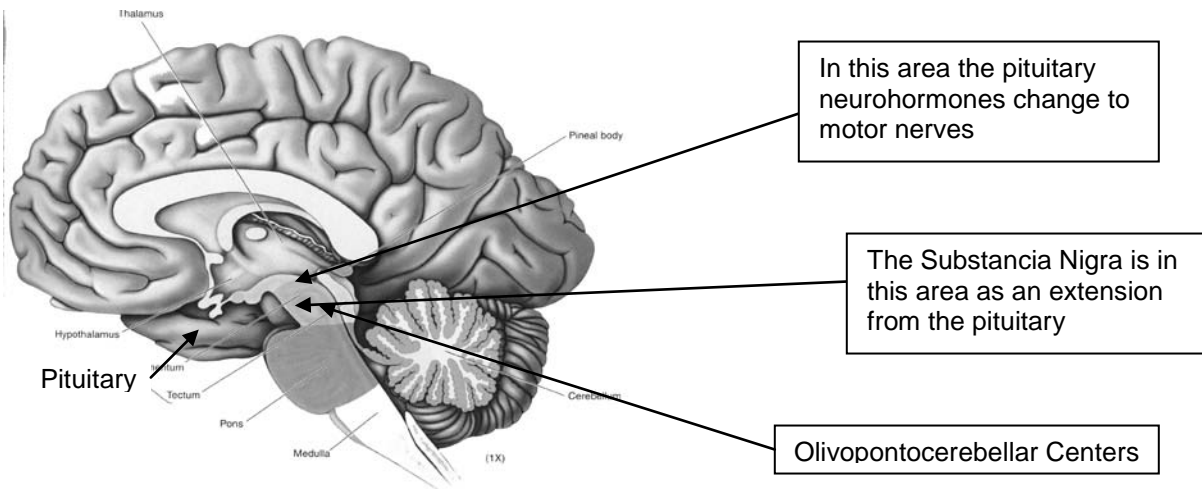

As the condition progresses there is a resting tremor, slow movement of body and speech (bradykinesia), drooling, increased appetite, intolerance to heat, oily skin, emotional instability and defective judgment.

We are happy to say we have seen a reversal of all symptoms using the remedies **Park** and **Flow Clear** in 100% of the subjects over the past 7 years of using these remedies.

PARKINSON'S SIMILAR CONDITIONS

In the area where neurohormones change to motor nerves there is a common weakness that gives most people "intentional tremors ". It means that as they move their hands intentionally they have tremors. Ironically, people with Parkinson's do not commonly have intentional tremors. In fact, there is no shaking when they intentionally move.

We made the remedy **Tremors and Shakes** for this common shake that is often mistaken for Parkinson's. We did not know at the time that it is also the answer for trigger fingers/thumbs. Digits that "catch", won't bend until they release in a jerk are controlled by this area and released by this remedy.

PARKINSON'S SIMILAR CONDITIONS CONTINUED

Olivopontocerebellar Atrophy is the name given to the condition (and our remedy) for olive-shaped nerve centers in brain stem shown on page 1. The condition is described by one dictionary as "a group of hereditary ataxias (impaired ability to coordinate movement) with mixed clinical features of pure cerebral ataxia, dementia, Parkinson's-like symptoms, spasticity, jerky, tic-like twitching and/or slow writhing movements, retinal degeneration and spinal cord disease mimicking. **Lewy Body Malady** is an inherited condition found at the juncture of the pituitary extension and the top of the brain stem. Its slow deterioration will mimic Parkinson's or complicate it.

The above disease can often come from a fall or injury to the brain stem. For similar injuries that start the shaking we made **Nerve/Muscle Fiber Enzymes** for pulled or stretched nerve fibers that start shaking symptoms after accidents. **Myoclonus Essential** is also for a shaking of the head. It's contractions of the neck and face muscles are distinctively different from Parkinson's.

Rubella Rumble is a remedy for symptoms that appear partially like the slow withering of MS or ALS and partially for spastic movements similar to Parkinson's. Usually the shakes are more subtle than Parkinson's, but many people fear that their small shakes are precursors to the stronger shakes of Parkinson's.

SUMMARY OF REMEDIES (with range of mega bottles needed)

NERVE/MUSCLE FIBER ENZYMES	2-4
LEWY BODY MALADY	2-4
MYOCLONUS ESSENTIAL	4-5
OLIVOPONTOCEREBELLAR ATROPHY	2-5
RUBELLA RUMBLE	2-5
TREMORS AND SHAKES	2-4

RELATED CONDITIONS

DYSTONIA is a stiffness, lack of movement as if frozen, that bears some relationship to the stiffness of Parkinson's. Dystonia starts in the Pituitary Stalk. The Posterior Pituitary starts in the pituitary stalk (and leads to the Substantia Nigra where Parkinson's is held).

Sometimes there is a light case of Dystonia occurring simultaneously to the Parkinson's symptoms. The most common source is the teeth nerve structure. For instance, the most common cause of dystonia seems to be **Neisseria**, probably sourced from **Teeth Neisseria**. Next most common is **Botulism**, probably sourced from **Teeth Botulism**. It is reasonable that any form of clostridium could come to the Stalk nerve plexus from **Teeth Clostridium**.

It is not uncommon to find **Coccoides Immetes** set into the stalk as fungal complication.

SUMMARY OF REMEDIES (with range of mega bottles needed)

BOTUBAN	1-2
T. BOTULISM	1-3
COCCOIDES IMMETES	1-2
TETANUS	1-2
T. CLOSTRIDIUM	1-3
NEISSERIA	1-2
T. NEISSERIA	2-3
