

GENITAL HERPES is described as a chronic infection caused by type 2 herpes simplex virus (HSV2), usually transmitted by sexual contact. Its symptoms are painful vesicular eruptions on the skin and mucous membranes of the genitalia of males and females.

We find that genital herpes is not just one virus, but a group of viruses and yeast that combine to make the eruptions.

Genital Herpes is based on the Syphilis Miasm. The propensity starts in the liver with one of the Syphilinum/Chlamydinum combinations, which stops the body's ability to absorb the amino acid, Lysine. (Whenever herpes breaks out, 500mg of lysine has often been the dosage of this amino acid to decrease the pain and inflammation).

Most people have a Syphilinum/Chlamydinum combination in their livers; so most people are susceptible to a herpes infection. The virus ensemble is composed of a smallpox residue, chicken pox and other nerve-eating components. The remedy, Nerve Herpes, contains the counter vibration of all of these elements. An unusual yeast of the Syphilis Miasm, whose counter vibration is contained in the remedy, Syphilinum Yeast, feeds the virus. **All four of the remedies listed in the upper right hand corner must be used together to get results.**

Contrary to the current opinion of physical science, herpes does not occasionally go to the brain. It always goes to the brain, causing a slowly increasing rejection of other people and their ideas. Gradually the person isolates themselves from others, calling them in some fashion wrong, because they disagree with their opinions. Often so few agree with their attitudes that they gradually isolate themselves with a reputation for being "strange". The vibrational elements of the brain aspect are contained in Genital/Brain Herpes.

In a fair number of cases there are reports that there is still an outbreak even after the above remedies are finished. The first conclusion of many is that the remedies did not work since current science says there is no cure for genital herpes. Further investigation finds that the genital herpes is indeed gone, but the eruption that was always thought to be herpes alone was not. In short, there are other infections that look like herpes and have been intertwined with the eruptions you have recognized.

Less serious, but still painful eruptions start with **CONDYLOMA LATUM**, soft, wart-like or blister-like red eruptions that can be on the genitalia or surrounding area. A variation on this theme is called **CONDYLOMA ACUMINATUM**. They are as painful as herpes and can feel/look the same. Remedies by each of these names are available. Condyloma Latum is included in the comprehensive remedy, **HG TOO**.

LYMPHOGRANULOMA INGUINALE is an infection of the lymph nodes that can carry simultaneous infections to herpes. It is included in the more comprehensive remedy **HG TOO**.

CHLAMYDIAL HERPES is not known as a scientific designation, but was found as a merged combination occasionally found to mimic genital herpes outbreaks. Of course, there is the common **CHLAMYDIA** that more complicates herpes than mimics the outbreak. **CHLAMYDIA TRACHOMATIS** is the common cause of endometriosis. Please remember that chlamydia is not exclusively genital in location. Non genital forms are chlamydial pneumonia and eye chlamydia. **PREVOTELLA DISIENS** is a similar, but rarer bacteria.

SUMMARY OF REMEDIES

(with range of mega bottles needed)

SYPHILINUM/	
CHLAMYDINUM *	4-6
NERVE HERPES	1-2
SYPHILINUM YEAST	1-2
GENITAL/BRAIN HERPES	1-2

* Choose one of the syphilinum/chlamydinum combinations from below. All four of the above remedies **must** be used together to get results.

***SYPHILINUM/ CHLAMYDINUM COMBINATIONS FOR HERPES**

(with range of mega bottles needed)

SYPH/CHLAMYD/ ALCOHOLINUM	4-6
SYPH/CHLAMYD/CHOLERINUM	4-6
SYPH/CHLAMYD/DISTEMPERINUM	4-6
SYPH/CHLAMYD/ESCHERICHINUM	4-6
SYPH/CHLAMYD/ERGOTULINUM	4-6
SYPH/CHLAMYD/LEPROSINUM	4-6
SYPH/CHLAMYD/MEDORRHINUM	4-6
SYPH/CHLAMYD/MYXINUM	4-6
SYPH/CHLAMYD/PENICILLINUM	4-6
SYPH/CHLAMYD/POLIOINUM	4-6
SYPH/CHLAMYD/TUBERCULINUM	4-6
SYPH/CHLAMYD/TYPHOIDINUM	4-6

MONTHS OF EXPERIENCE - 129
APRX # PEOPLE - 1000+

COXSACKIE G strongly mimics the herpes outbreak and often carries an oral herpes outbreak as well. Current science recognizes only Cocksackie A and B. Like known forms of coxsackie, this will often bind other pathogens, especially in the spine. This coxsackie seems to be stronger than the currently known forms and often has a tiredness accompanying the herpes-like symptoms.

Frequently there are complications to genital herpes. They are sufficiently different from herpes to a trained eye to not be mistaken for herpes. You may not have a trained eye, so it would be wise to check for these also.

HAEMOPHILUS DUCREYI develops papules and chancroides on the genitals and surrounding areas and ulcerate. Herpes can do the same, but these look different. They resemble lymphogranulomas and syphilis. Sometimes a venereal wart can grow and the remedy for it is included in **PAPILLOMA**. This remedy is more designed for Human Papilloma Virus (HPV) and has worked exceptionally well for this latter issue that often runs with herpes. Tuberculosis complicates genital infections and is described elsewhere in more detail under the same title.

MOLLUSCUM CONTAGIOSUM is a fungus sometimes found in the genital area (and other areas as well) as well as **LICHEN SCLEROSIS**

SUMMARY OF COMPLIMENTARY REMEDIES TO GENITAL HERPES (with range of mega bottles needed)

CALYMMATOUS GRANULOMATIS	3-4
CHICKEN POX NERVES	2-4
CHICKEN POX SPINE	2-4
CHLAMYDIA	1
CHLAMYDIAL HERPES	1-2
CHLAMYDIA TRACHOMATIS	1
CHRONIC GRANULOMATOUS COMPLEX 1	4-5
CHRONIC GRANULOMATOUS COMPLEX 2	4-5
CHRONIC GRANULOMATOUS COMPLEX 3	4-5
CONDYLOMA ACCUMINATA	1-2
CONDYLOMA LATUM	1-2
COXSACKIE G	1-2
ENDOMUCOUSITIS	1-2
GONORRHEA	1-2
GUMMA	4-6
HAEMOPHILUS DUCREYI	1-2
HERPES INHERITED	2-4
INTRADERMAL CARCINOMA COMPLEX	4-5
HG TOO	1-2
LEPROSY	1-2
LICHEN PLANUS	1-2
LICHEN SCLEROSIS	3-6
LYMPHOGRANULOMA INGUINALE	1-2
MELANINGOGENICUS ACCHAROLYTICUS	2-4
MOLLUSCUM CONTAGIOSUM	2-4
PAPILLOMA	3-5
PREVOTELLA DISIENS	2-5
STREP A 1-9	2-5
STREP FOETIDUS	2-3
SYPHILIS	1-2
TB ENZYMES	3-5
TRICHOMONAS*	1
VESTIBULAR REGENERATION	3-5
*CRITTER BE GONE could be used	2

SYPHILIS and/or active **GONORRHEA** often accompanies herpes. The infections do not strongly resemble herpes and sometimes do not even show as an eruption or an infection. These are important for so many reasons that it is wise to check for these, even when you don't think you could possibly have these infections. Both are on the rise again like many other diseases that "cycle". The nicest people can pick these up and you might be one of those nice, but unlucky people.

When you have syphilis, nothing else heals well. You may take remedies and even medicine for various conditions and not heal as quickly as other people. That is a sign, albeit syphilis is not the only possible cause of that sign. Gumma is a tumor based on syphilis that we don't see often. When we do see it is a major part of the healing. We have seen many people who once had the disease or the suspicion of the disease and took some medicine for it. Unfortunately the medicine may have only suppressed it and you are still carrying a not-so-latent case of it.

Gonorrhea can be even more subtle. It affects muscles and joints. Long term cases often give a stiffness that resembles arthritis but isn't arthritis. On the other hand, it can cause growths on bones that disfigure finger joints. See the remedy **BONE JOINT CYSTS** for a variation on this theme.

AIDS often accompanies Syphilis and Gonorrhea. See **AIDS** protocol.

While we are talking about all the things that you don't want to imagine having, don't forget that the bacteria, **LEPROSY** can also grow in genital areas. Before you think this has gone too far, you should know that we have found this more times than we want to acknowledge. It is more sub-clinical than what you have heard and is not a full-blown case of the disease that has been around since before the Bible. Don't worry, your genitals aren't about to fall off, but this bacteria slowly spreads and the first place it spreads to is the brain, just like syphilis and genital herpes.

More remedies for conditions that look like herpes, but are not genital herpes

Most people have no idea what other people's herpes looks like. They only know what their breakout looks like and cannot distinguish the difference between herpes and their outbreak. In addition to the remedies previously detailed that are related to sexually transmitted diseases, here are less common, unrelated remedies in the same geography.

CHRONIC GRANULOMATOUS COMPLEX 1, CHRONIC GRANULOMATOUS COMPLEX 2 and CHRONIC GRANULOMATOUS COMPLEX 3 can cause rash like breakouts in the genital area. Although this condition is more commonly found in other areas of the body, it is possible for rare cases to not only show rashes, but also show lumps (included in each remedy).

ENDOMUCOSITIS was added in 2003 as a scientifically unidentified Sexually Transmitted Disease that affects the vagina, prostate, ovaries, testicles and adrenals. In fact this could spread to any mucous area, including the brain. The first findings show great sensitivity to lack of estrogen, thinning of the vulva and head hair loss.

HERPES INHERITED comes from at least two generations ago people who had genital herpes when they conceived. It would be logical to expect the resulting breakouts to be in the genital area. However, they can be anywhere. They generally appear as hot lumps appearing like boils that will not burst. We have seen them on the necks of children and the legs of adults. **VESTIBULAR REGENERATION** is a remedy for those with sensitive cells in the openings of their bodies. Although not common it is meaningful to those who the outbreak.

INTRADERMAL CARCINOMA COMPLEX - Also called Bowen's Disease. An inherited skin, epidermal, intra organ wall and mucous membrane Squamous cell carcinoma disease with a radiation and papilloma herpes base. It has a predisposition for exposed outer skin and genitals. Plaque may develop as thick skin (especially in genitals); as brownish, thick plaque on limbs; or red skin with yellow crusted plaque. Internally, where it is not well known, it may develop as systemic cancer. For some there is axillary crease redness and itchiness.

LICHEN PLANUS is a fungus that sometimes complicates genital herpes. It looks like a dry crust that comes and goes.

MELANINGOGENICUS ACCHAROLYTICUS is a bacteria infection most known to cause small bumps in the mucous area of the mouth. We find it also can appear in the mucous area of the genitals.

HERPES LOOK-ALIKE CONTINUED

STREP FUNGUS A 1-9 This may come with birth and not be obvious until a person catches a venereal disease. It is the cause of Puerperal Fever, but the infection may have been overlooked as a passing "whatever". Science has declared Strep A as an old terminology and now calls it Strep Pyrogenes. The trouble is not all Strep As are Strep Pyrogenes and not all Strep Pyrogenes are Strep A. We accepted the change in terminology for awhile, but now have to distinguish between the two and expose the mistake.

STREP FOETIDUS is a common strep breakout for genital areas. It rarely appears as complications to genital herpes, but there are those rare cases.

TRICHOMONAS is actually a parasite that comes to genital areas that are in trouble. It does not break out like herpes, but imbeds itself in soft mucousy and tender areas. Men don't seem to recognize or feel it. However, women often describe it as feeling "like a thousand little cuts" down there. It may be the cause of the scientifically mysterious condition called Vulvodynia. When it is sore to make love, this is often one of the causes. As with other parasites, the remedy. **CRITTER BE GONE**, can eliminate this parasite.
