

The prostate in disease has been a mystery for all in the health profession. Ironically, since many researchers are males, there has been an expectation that men take care of their own problems first. This is certainly the proof of the opposite because male doctors wring their hands with this issue.

The prostate suffers most from lack of testosterone. Testosterone is produced from androgens in the adrenals primarily by the testes. If the androgens are low the testosterone is low.

The adrenals are highly controlled by the pituitary/hypothalamus diencephalon hormone organs (in the brain). The repair of the prostate is centered in the adrenals while the larger scale repair is centered in the brain and thymus (which controls the hormones of the brain and the antigens that attack the prostate). Growths on the pituitary often weaken the adrenals.

Current science measures Prostate Specific Antigens (PSA) as the center focus of analysis of prostate problems. We find this an interesting measure, but not the best. PSA count has been tested as high (bad) when there was no prostate in the body, which leaves questions about how specific the measurement is. We would suggest that the amount of testosterone and the availability of testosterone would be a better measurement of what keeps a prostate healthy. We stand at odds with current science in our belief that testosterone levels can be returned to previous levels instead of accepting that low testosterone goes with age. Lack of testosterone is also related to hair loss plus depression in both males and females.

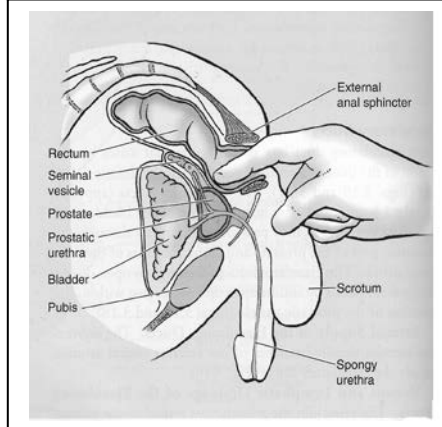

After years of testing we found that lymphocytes from the Thymus carry pathogens to the prostate when testosterone decreases. Essentially the pathogen-laden lymphocytes fill a vacuum created by hormone departure. **Andropause Male** steadily reduces the PSA count for prostate problems by reestablishing a flow of hormones from the adrenals to the prostate.

Prostate Shape is used for the cause of prostate swelling. Saw Palmetto is the long-term favorite herb for swelling prostates because it tightens muscles. The prostate is part muscle and part gland. Mexican herbal women advise Saw Palmetto also for women because it strengthens breast muscles. However, the herb does little for prostate cancer.

The most common form of Prostate Cancer is **Embryonal Carcinoma**, according to current science. We find **Paramyxoma** is more prevalent. The paramyxo virus is the parent virus of mumps and mumps has long been associated with male genital problems. **Myxomas** are next, followed by **Germinomas**. Rarely do we find a **Leiomyosquamoma** on the muscle portion. All remedies ending in "oma" usually require a retrovirus. We have found **RV Cell** works best with this group of "omas". We find that some cases go into a deep cellular form of decline so we developed **Rehabilitate Prostate** to resolve that depth.

SUMMARY OF REMEDIES
 (with range of mega bottles needed)

ADRENAL EXHAUSTION MALE	5-6
ADRENAL THYROID FATIGUE	5-6
ANDROPAUSE MALE	3-4
BASAL CELL CARCINOMA	4-6
EMBRYONAL CARCINOMA	3-4
GENITAL URINARY SARCOMA	4-6
GERMINOMA	4-5
HYPOTHALAMUS EXHAUSTION	
FEMALE	5-6
LEIOMYOSQAMOMA	4-6
LYMPH NODE COMPLEX	4-5
MEN I	5-6
MYXOMA	4-6
PARAMYXOMA	4-6
PROSTATE REHABILITATE	4-5
PROSTATE SHAPE	4-5
REHABILITATE PROSTATE	4-5
RV CELL	4-6
SEXUAL SENSITIVITY	4-6
SQUAMOUS CELL CARCINOMA	4-6

Penile cancer affects the prostate. It is clinically not common, but subclinically is not rare. The subject usually does not perceive it as penile cancer. It is more associated as a discomfort extending from prostate problems. Most men are surprised that there is any penile problem (except erectile dysfunction). For most, the answer is **Squamous Cell Carcinoma**, usually with a retrovirus. Rarely do we find **Basal Cell Carcinoma**. A more general remedy **Sexual Sensitivity** for the axolemma may set the stage for penile and clitoral cancer.

The whole genital area may react to multiple issues of the prostate, from infections to diseases. Accordingly we made **Genital Urinary Sarcoma Complex**.

For some there is a problem with Lymph Nodes. In short, the lymph nodes, controlled by B Lymphocytes (from the bones), have an inherited weakness and the cancer is actually a lymph node cancer in the prostate more than a prostate cancer. It is also possible to have both lymph node cancer and an "oma" (neoplasm) form of cancer. For just the inherited lymph node issue we use **Lymph Node Complex** which is complete with its own lymph "oma" inside the remedy. The remedy helps all lymph nodes in the body which provides an additional value to possible problems elsewhere. The remedy is also used for female breast issues.

A common request after prostate problems are solved is for the return of libido. **Adrenal Thyroid Fatigue** is a solution for one of the causes of prostate problems so it adds to restoration. **Hypothalamus Exhaustion Male** often helps sagging libido, before or after prostate problems.
